

The 33rd edition of ENERGETAB® 2020 is about to start

On Tuesday, September 15, the 3-day ENERGETAB fair begins - it is already its 33rd edition, this time organized during the pandemic period - therefore our exhibitors and visitors are bound by special sanitary requirements.

The official opening of the fair will take place in Pavilion "A" on the exhibition grounds of ZIAD Bielsko-Biała SA on September 15, 2020 at 11.00.

The fair gathered about 250 exhibitors - mainly from Poland, as foreign companies were mostly afraid of difficulties with international transport. The exhibitors decided to come to Bielsko-Biała to show that they are developing and working on new solutions. They also count on establishing new business relationships and strengthening the existing ones with other fair participants, who are no longer satisfied with only communicating only via the Internet. We do not need to emphasize how important this is for the economy, especially in the current context.

The fair hosts suppliers of products for both "classic" energy and many companies offering apparatus and automation for "distributed" energy.

There is also a separate "electromobility zone" which offers an opportunity to test rides in electric cars and a "practical demonstration zone" at the ZIAD Bielsko-Biała SA training ground.

Traditionally, during the fair, there will be a competition rewarding "the particularly outstanding products" submitted by exhibitors. The prestigious awards granted in the competition include the Minister of Climate Cup, the Medal of the President of SEP, medals and statuettes of the Fair Partners and the "Golden Lion" named after Kazimierz Szpotański.

The Fair is held under the Honorary Patronage of **the Minister of Climate** and the Strategic Partner is, traditionally, **TAURON Dystrybucja S.A.**

The organizer of the fair made every effort to ensure that the fair is completely safe for both exhibitors and visitors. Each participant of the fair will receive a protective helmet free of charge, there will be vending machines selling masks, numerous points with disinfectants will be made available, and the stands will be frequently disinfected. Undoubtedly, an additional factor increasing safety is the location of the fair exhibition, which spreads over 10 acres of a beautifully situated area at the foot of Szyndzielnia.

NOTE: visitors are asked to register in advance on the energetab.pl website to receive a bar code that allows for efficient entry to the fairgrounds. The visitor registration is obligatory and follows sanitary recommendations. The above-mentioned website also contains detailed information, such as the map of the fair, with entrances and car parks clearly marked, a list of exhibitors, regulations for visitors and detailed rules for ensuring the safety of fair participants.

Admission to the fair and parking lots at ZIAD are free of charge.

THE COMPETITION for the most energetic photograph.

The visitors who send their photos taken during their stay at ENERGETAB 2020 to marketing@ziad.bielsko.pl will take part in a competition with valuable prizes with a total value of PLN 5,000. The photos must be sent no later than on 20 September 2020.

The ENERGETAB®2020 fair is the first the electrical engineering and power industry fair organized in the non-virtual way in Poland after lockdown caused by the pandemic. We know that many people interested in visiting the fair cannot do it due to personal concerns or restrictions in force in their company. That is why we will successively record short reports and interviews and we will place them right away on the fair website and on our Facebook profile.

And next year's ENERGETAB® 2021 fair will be held from 14 to 16 September 2021.

**We invite you to Bielsko-Biała to take part in
33rd Bielsko-Biala International Power Industry Fair ENERGETAB®2020**
